PROFESSIONAL SUMMARY

Full-Stack and Flutter Developer with hands-on internship experience shipping features across fintech mobile apps, logistics platforms, and IoT systems. Comfortable across the full stack — from Flutter and React UIs to Node.js/Flask backends and Firebase real-time databases. Strong at building cross-platform, responsive applications and delivering within agile sprint cycles.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript
Mobile: Flutter (Provider/Riverpod), React Native — cross-platform, responsive UI
Frontend: ReactJS, HTML, CSS — responsive design, state management
Backend: Node.js, Express.js, Flask — REST API design and integration
Databases: MongoDB, PostgreSQL, Firebase Realtime DB
Tools: Git, GitHub, Vercel, Render, Netlify — CI/CD basics, agile workflows
Familiar with: TensorFlow, OpenAI API, Docker

WORK EXPERIENCE

Software Development Intern — Arthasva (FinTech Startup)

Jun–Sep 2025 · Remote

React · React Native · Electron.js · Agile

- Built a 3-module Transport Management System in Electron.js (quotation, lorry receipt, invoice tracking), reducing manual logistics paperwork for the operations team.
- Shipped funnel management, lead tracking, and KPI dashboard features on LeadGen (React), consolidating sales pipeline visibility into a single interface.
- Developed 5+ UI components for Nivesh (React Native fintech app), including investment tracking screens and financial data visualisation flows.
- Delivered across 3 products in parallel within agile sprint cycles — contributing to debugging, code reviews, and iterative feature releases.

PROJECTS

MedDrip — IoT Saline Monitoring System

May 2025

ESP32 · Firebase · Flutter

- Engineered a full-stack IoT system — ESP32 sensors → Firebase Realtime DB → Flutter app — delivering <2s alert latency for remote saline level monitoring and automated flow control.
- Built a live Flutter dashboard with real-time data sync, hardware-triggered alerts, and remote-control UI — deployed and validated on physical hardware.

Hawkeye — Drone Detection System

Nov 2024

ReactJS · Flask · YOLOv7 · OpenCV

- Built a full-stack AI surveillance system — custom-trained YOLOv7 model served via Flask REST API — achieving 15–25 FPS real-time drone detection across webcam, video, and image inputs using optimised OpenCV pipelines.
- Developed a responsive React frontend with live detection overlays, file upload, and result visualisation — complete end-to-end from model training to deployed web interface.

ParkEase — Smart Car Parking System (IoT)

May 2024

ESP32 · Firebase · Flutter

- Developed an IoT parking system integrating ESP32 sensors, Firebase Realtime DB, and Flutter — enabling live slot status tracking (Available / Booked / Occupied) with instant database sync.
- Designed a dynamic Flutter interface with slot visualisation and booking flow, demonstrating cross-platform mobile UI and hardware-to-app data pipeline integration.

EDUCATION

B.Tech — Electronics & Computer Science, SJCEM Palghar

Nov 2022 – May 2026

CGPA: 8.0 | Relevant coursework: Data Structures, DBMS, OOP, Computer Networks

ACTIVITIES

GKDC & FKDC Go-Kart Competitions (Coimbatore)

Oct 2025 & Feb 2026

Driver (Skid Pad & Autocross) and Steering Team Lead; resolved live mechanical challenges under race conditions
